Re: Perfection Manufacturing
EPA I.D. No.: MOD041885856

Gentlemen:

This will advise you that the manufacturing operations at 5411 Bulwer was discontinued on 5-27-83.

The plant had been a regulated generator of hazardous waste under the Missouri State regulations producing limited quantities of spent solvent from its painting operations.

All regulated material was removed from the plant for off-site disposal within 90 days of its generation thereby exempting the plant from regulation as a storage facility. Regular quarterly reports were filed covering all off-site shipments.

The final shipment of spent solvent took place on 2-28-83 and consisted of 2 drums which were sent to T.W.I. Inc. A copy of the completed and signed manifest evidencing delivery is attached.

No hazardous waste or waste residue remains at the plant and no future activity is contemplated which would generate hazardous waste.

If you have any questions concerning the status of the plant, please contact Jerry Talbot at (704) 735-6582.

Sincerely,

Jerry W. Talbot
Plant Manager
